EXTRACT from a LECTURE delivered by
T. PRIDGIN TEALE, M.A., OXON, F.R.S.,
before the Society of Arts, Feb. 3rd, 1892.

THE MARLBOROUGH GRATE.

→* A MODEL ROOM, *←

Garland's Patent, No. 13,355.

"And now let me venture to tell you what I should do were I to construct an office in the centre of a town. I should begin with the fireplace. Let it be constructed on the principles I have been teaching for the last ten years, and which were brought to a focus in my lecture at the Royal Institution of 1886, principles which are at last influencing the construction of fire grates throughout the kingdom. Shortly stated they are—

1. The back and sides of the fireplace to be firebrick built solid.
2. The depth of grate from front to back never to be less than nine inches.
3. The back to lean over the fire, not to lean away from it.
4. The front bars to be vertical and thin, not horizontal and thick.
5. The ashplace under the grid to be made into a closed hot chamber by moveable shield named an 'Economiser.'

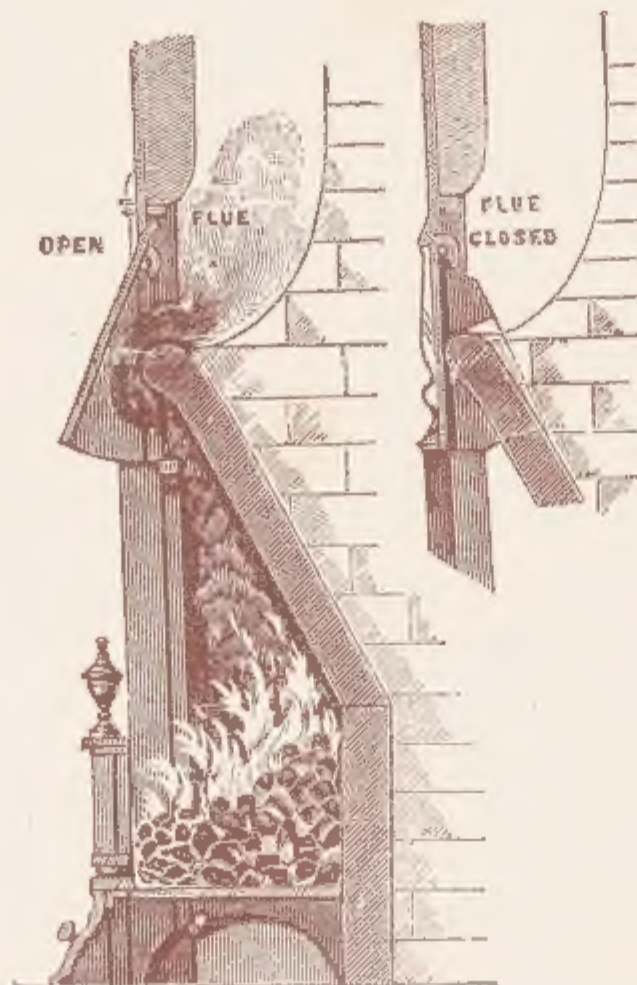

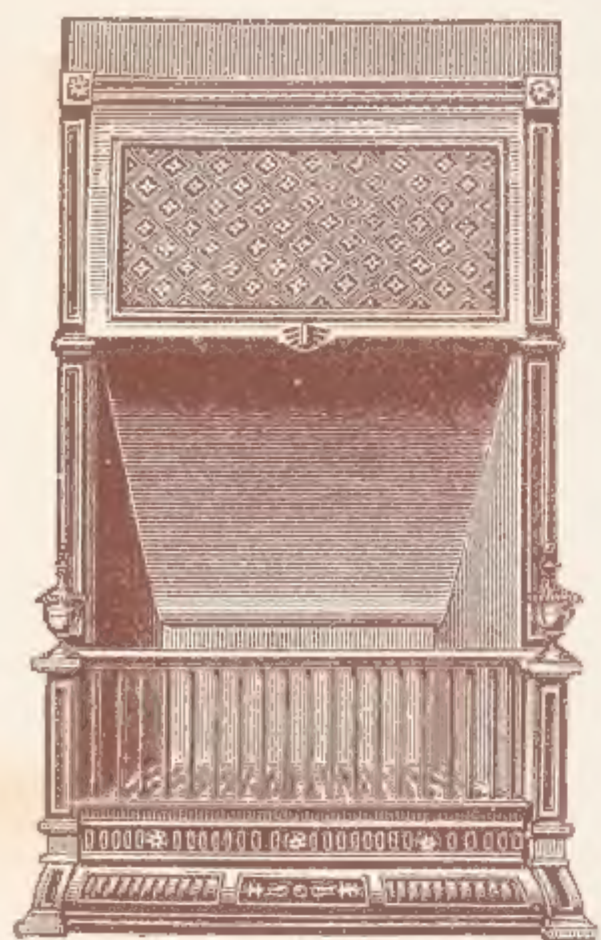

"The effects of this construction are—

- (a.) Great diminution of dust, since the ashes fall into a closed ash chamber.
- (b.) Better warming of the room, with a diminution of about one-fourth in the quantity of coal used.
- (c.) Diminished draught across the floor from diminished roar up the chimney when fire is burning briskly.
- (d.) Diminished production of soot.

"These are the principles which I have urged, and they are open to everyone to adopt. I do not speak of a further improvement, as it is the **SUBJECT OF A PATENT**, and is not open to everyone to copy."

THE MARLBOROUGH GRATE.

Royal Letters Patent, No. 13,355, Granted to R. W. Garland.

SECTION.

IN the construction of this Grate the Brick Back is made to project over the fire, to deflect the heat which would otherwise pass up the chimney, and constitutes a heating surface, by which the gases are at once ignited and the smoke consumed.

The projecting canopy is removable and adjustable, so as to give easy access to the chimney for building up the back of the fire and sweeping the chimney.

The fuel consumed is very small, for the great amount of heat obtained.

The adjustable Canopy acts as a regulator or ventilator in the summer, and a damper in winter. It can be opened and closed to any required degree. No other door is necessary for closing the chimney. There is perfect combustion and consumption of fuel.

It is the best Grate to cure a smoky chimney. By means of the Economiser, or fret, under the bars, a more perfect combustion is insured and a brighter fire obtained.

ADVANTAGES.

GREAT HEATING POWER AND ECONOMY IN FUEL.

PERFECT COMBUSTION AND CONSUMPTION OF SMOKE.

CONTROLLED COMBUSTION.

EASE AND SIMPLICITY IN FIXING AND SWEEPING.

CONTROLLED VENTILATION BY MEANS OF ADJUSTABLE CANOPY.

CURE FOR SMOKY CHIMNEYS.

INSTRUCTIONS FOR FIXING.

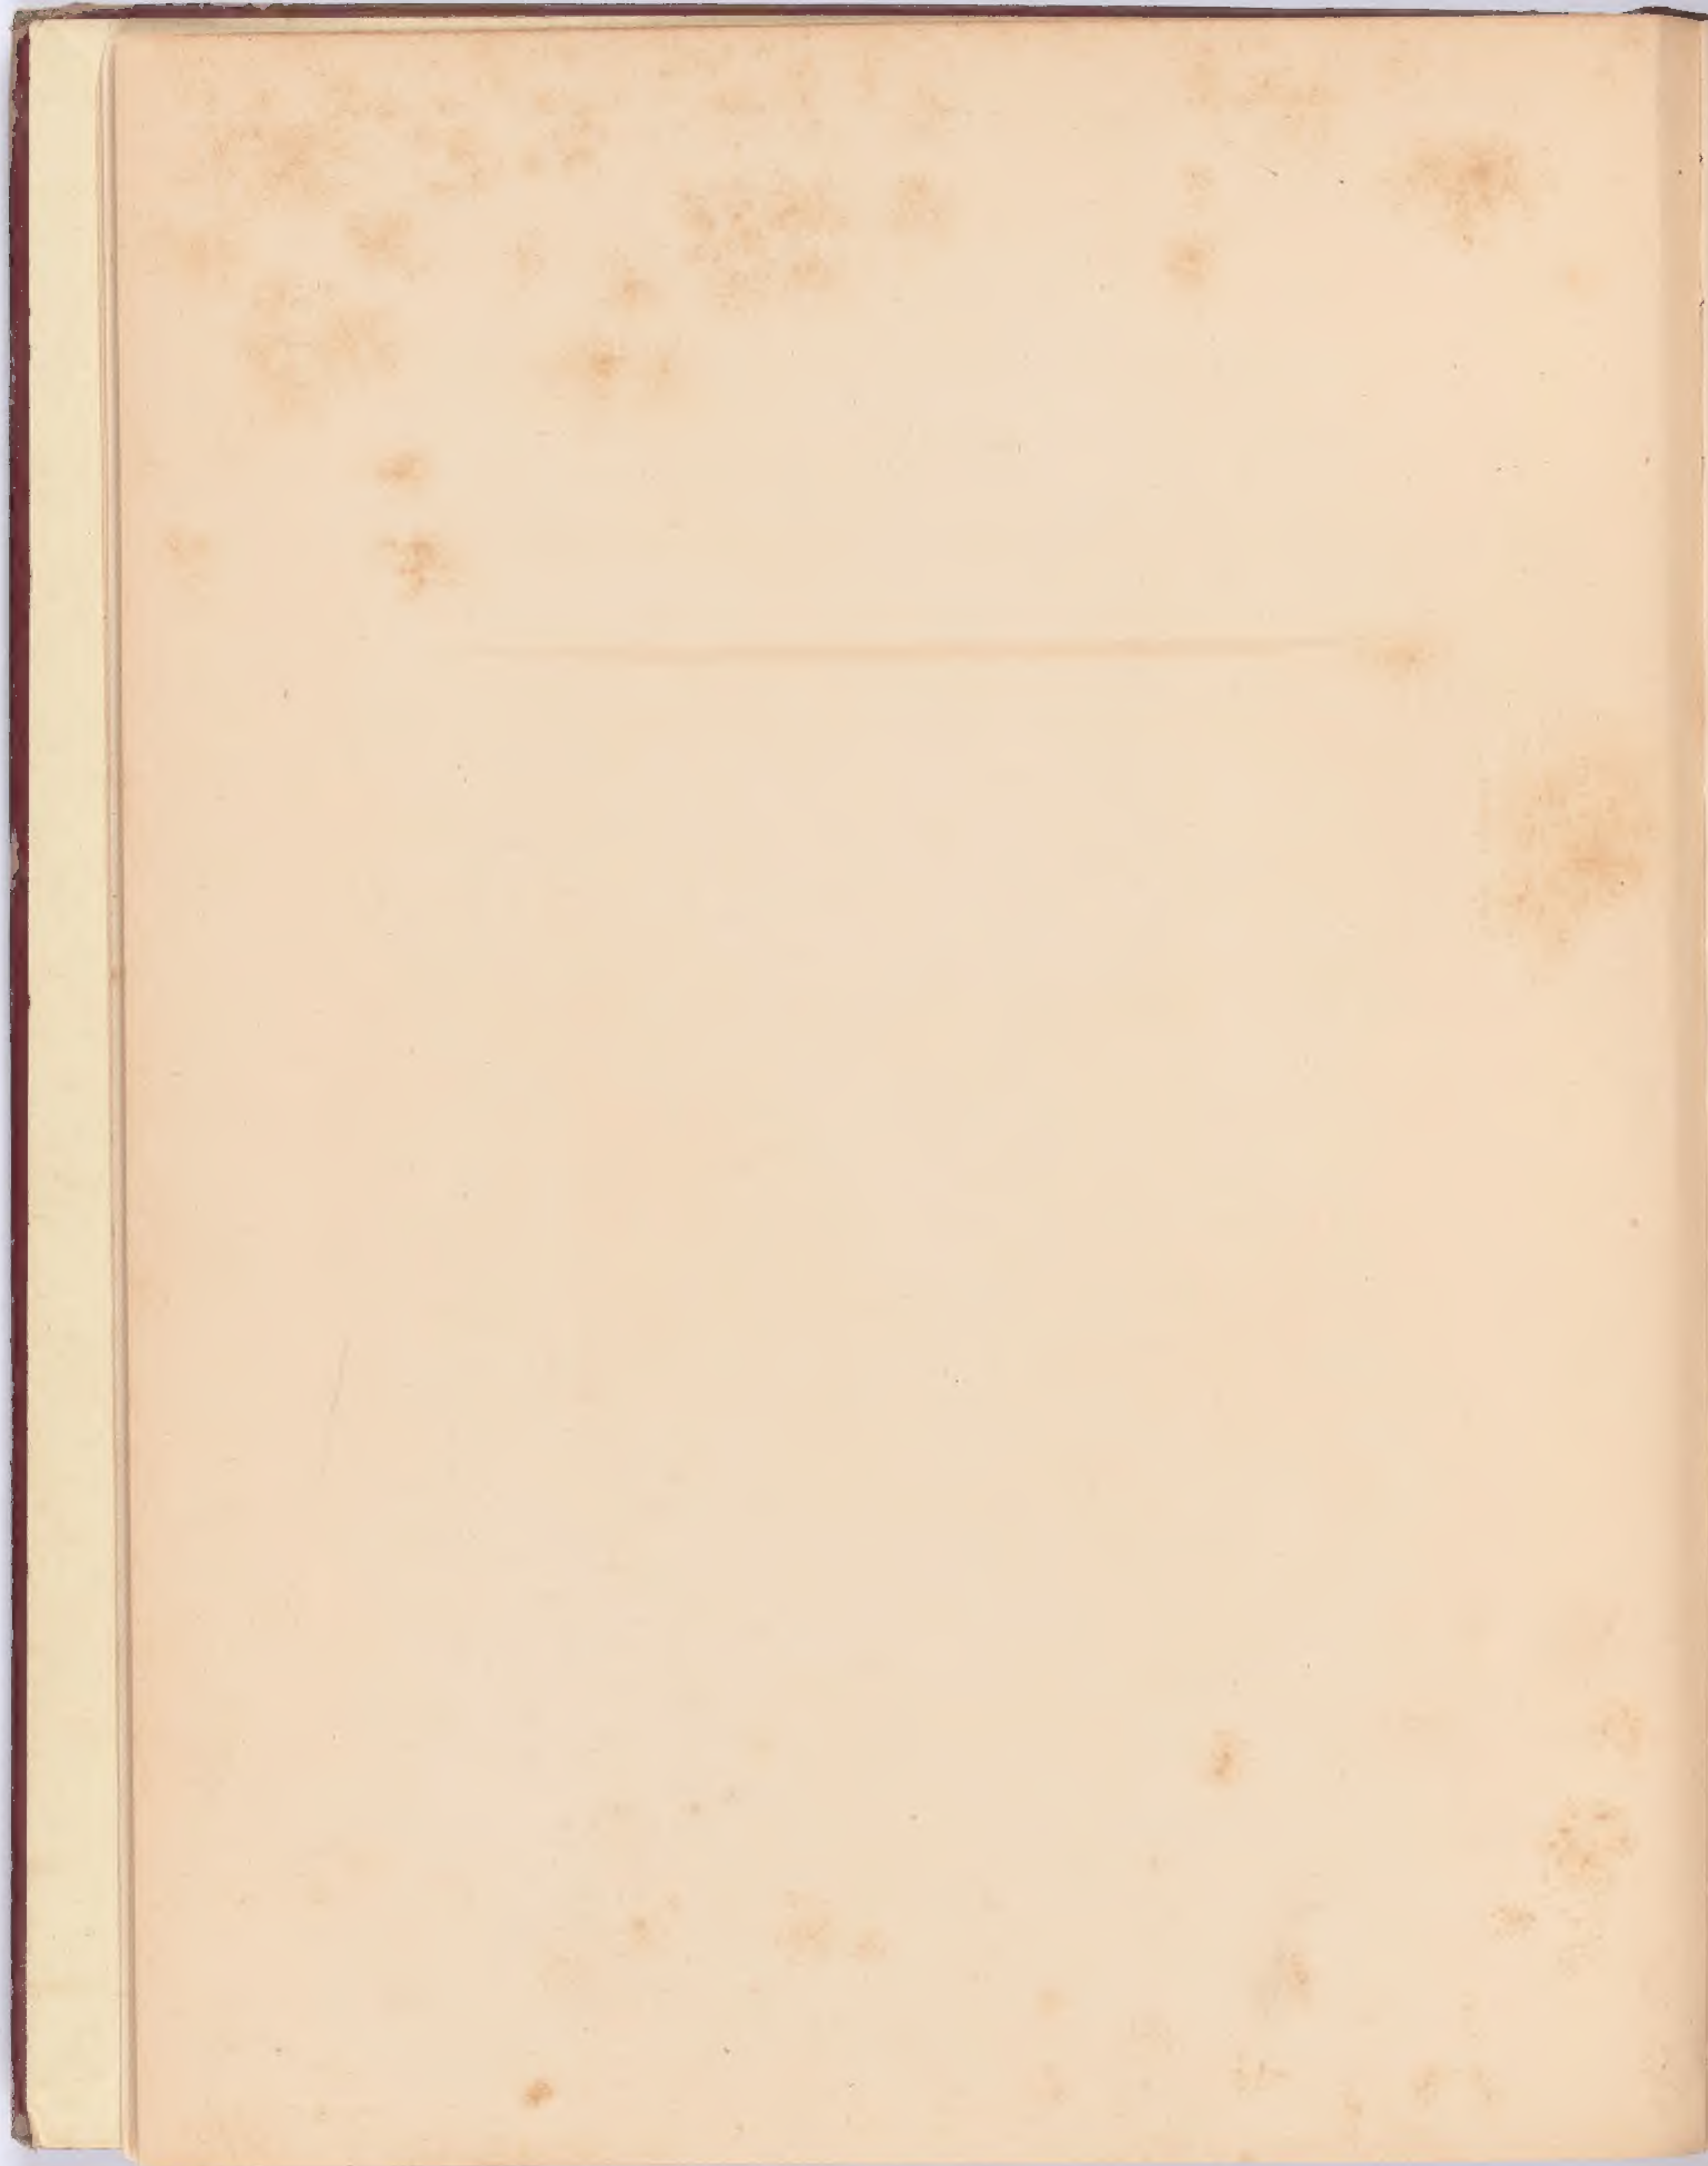

First.—Place the Grate square in the Chimney-piece, and clamp same securely; in case of Interiors a peg will be found at bottom to insert in Hearth-stone.

Second.—Point all round at back to prevent any smoke escaping into room.

Third.—Insert the Fire Brick Back and build up solid, graduating the brick-work into the flue, as annexed diagram.

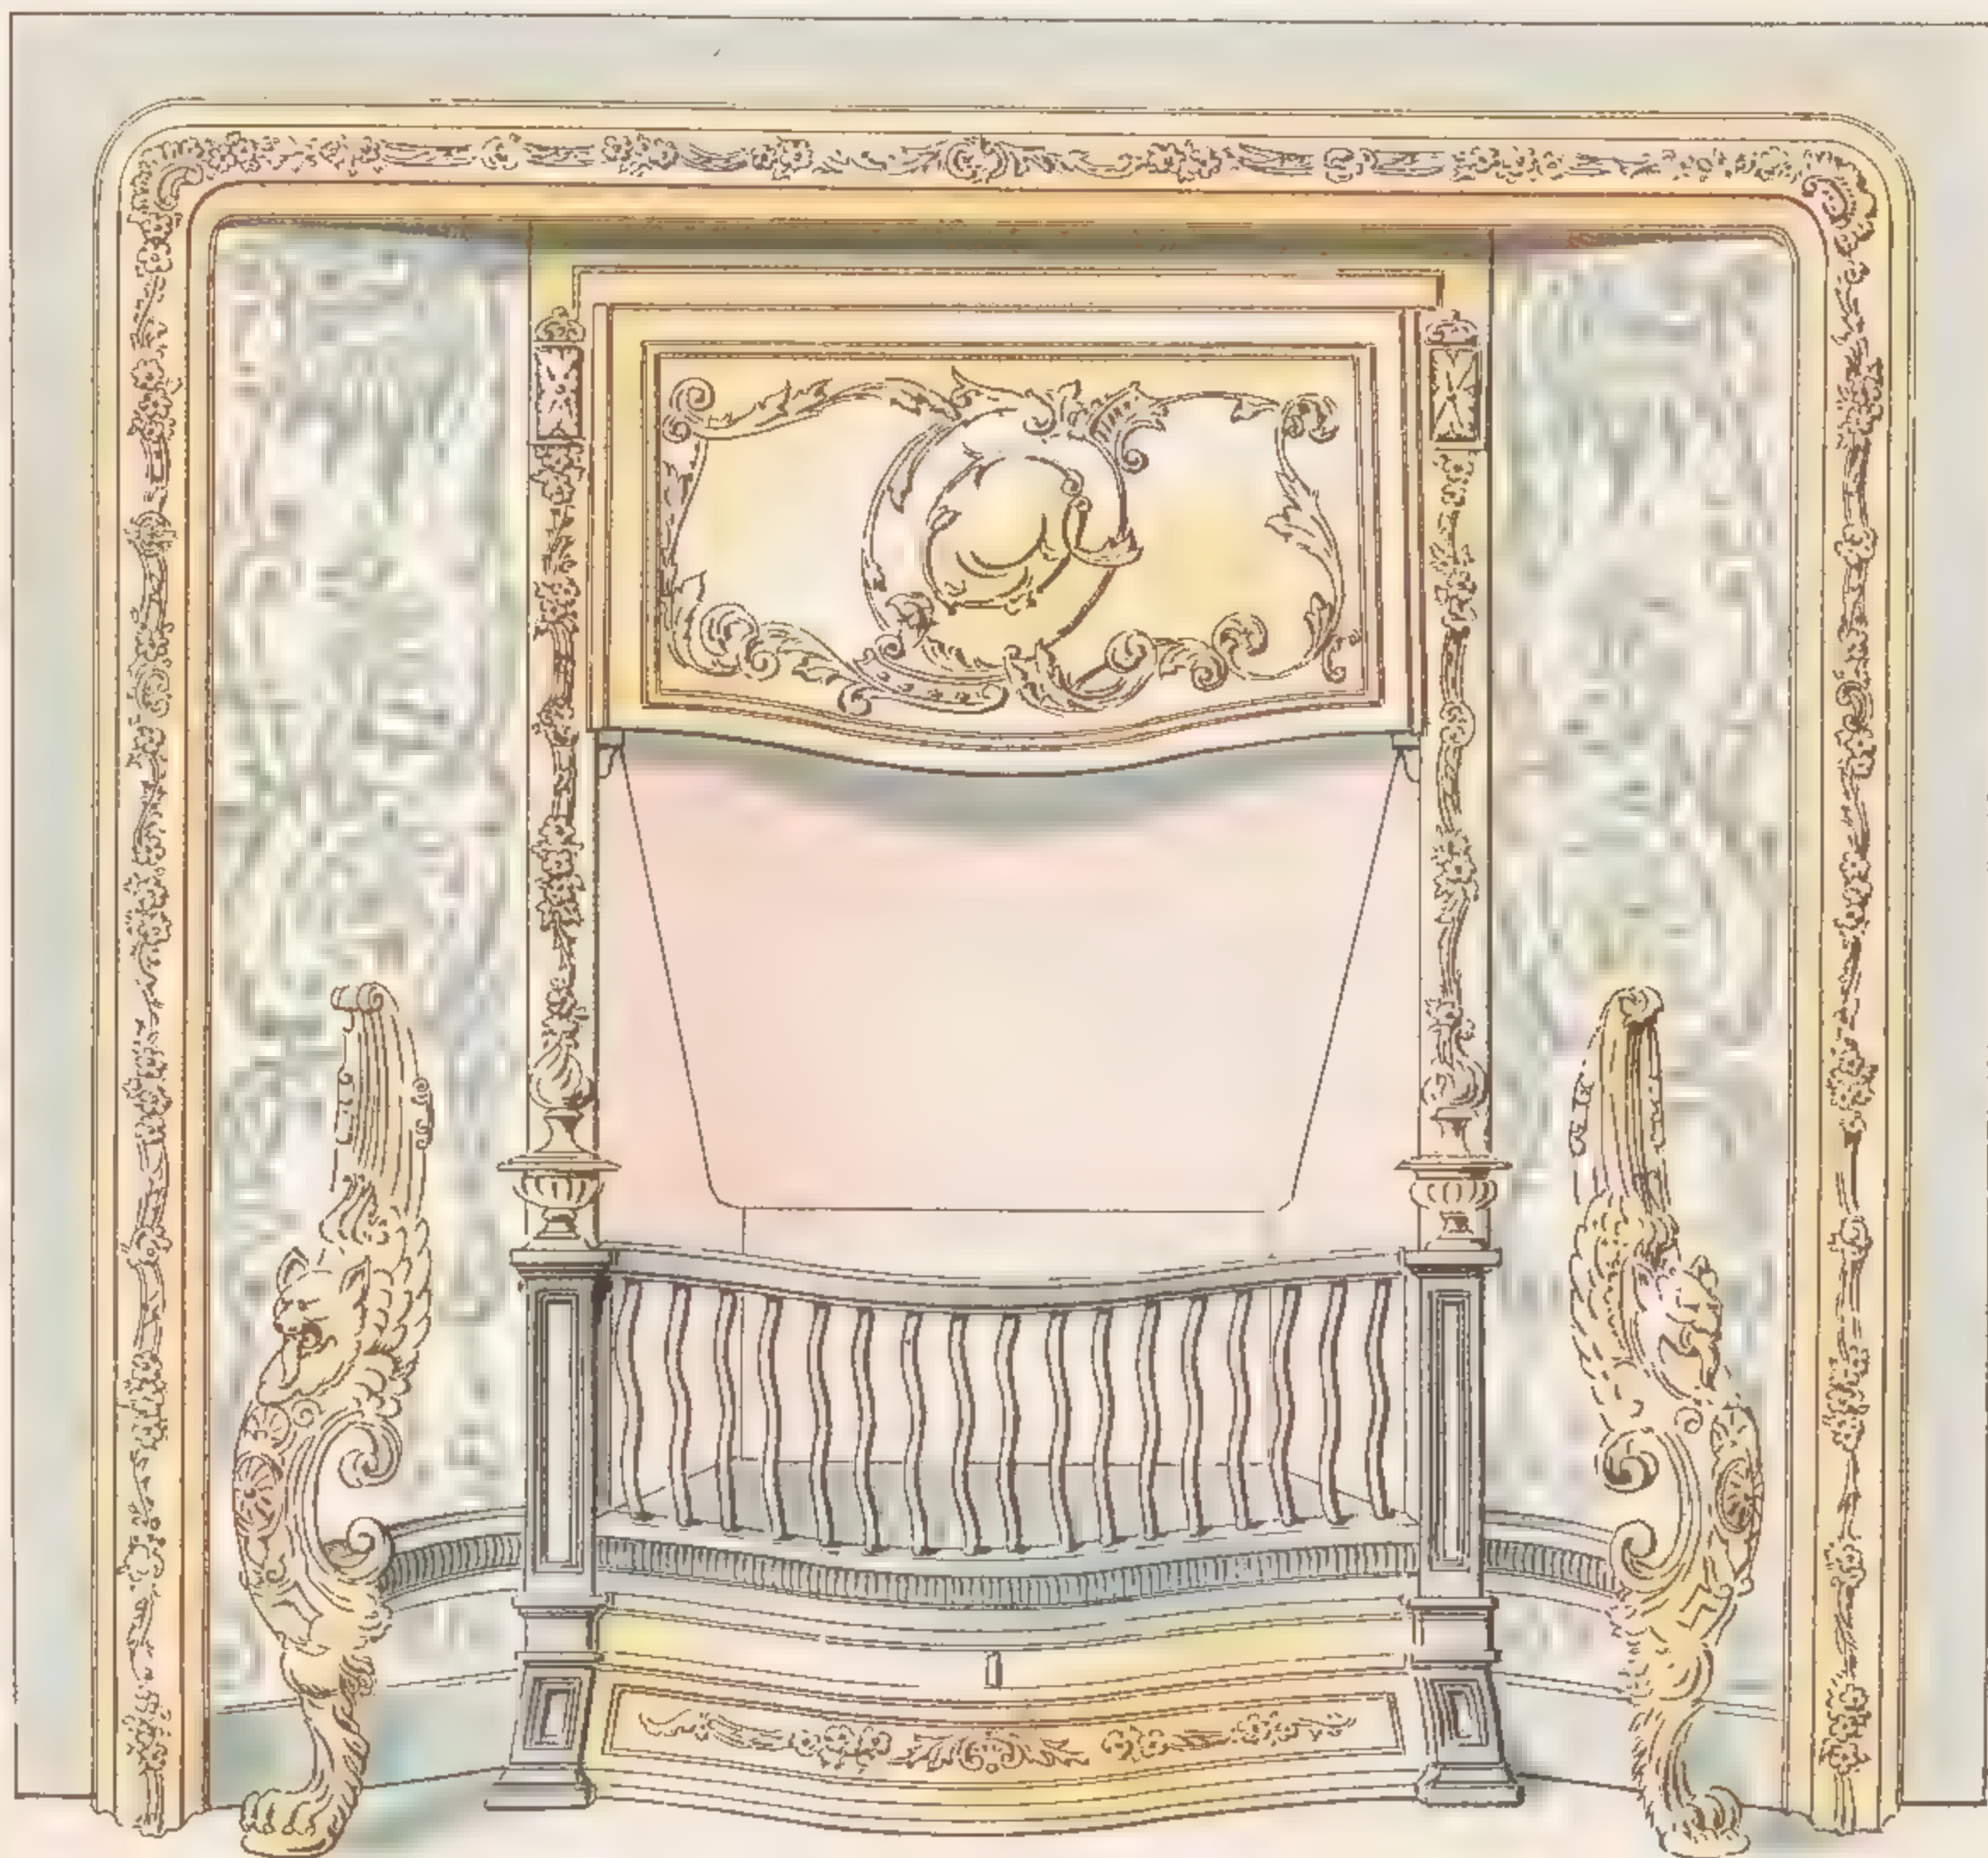

Fourth.—Take care that there are no wood beams underneath, or any wood-work in contact with the Fire Brick Back.

Fifth.—In case of Fire Brick Back cracking, it should be pointed with a fire-proof cement, when it will be as good as new.

ALL POLISHED BRASS FIRE SCREEN.

LOUIS XV. STYLE.

No. 256.

Extreme Sizes—33 in wide x 27 in. high.

All rich Polished Brass, Brass Wire Gauze	£15 15 0
---	-----	-----	-----	-----	----------

An ornate decorative border design, labeled 'No. 265.' at the bottom. The design is symmetrical and features a central floral motif with multiple layers of leaves and flowers. This central element is flanked by large, curved scrollwork that extends towards the top and bottom corners. The entire design is rendered in a golden-brown color with black outlines, set against a light cream background. The style is characteristic of 19th-century decorative arts.

No. 265.

All Polished Brass with Brass Wire Gauze	£7 10 0
